Applied Materials EPIC Center Launch

May 22, 2023

Lisa Su, Chair and Chief Executive Officer, AMD

Congratulations to the entire Applied Materials team on the launch of this important initiative. It's an incredibly exciting time to be in our industry. Over the next decade, the demand for advanced semiconductors will only increase as they become even more essential to every aspect of our lives, including new discoveries in medicine, physics, climate research, material science and energy – all powered by high-performance and adaptive computing, which requires the most advanced semiconductor process technologies in the world.

This is why today's event is so important. This new center will provide a forum for the best minds from across the public and private ecosystems to work together, helping educate and inspire the next generation of scientists and accelerating the development of new technologies that will become critical over the next decade. At AMD, we believe centers like this are an important part of how we work with the entire semiconductor ecosystem to push the limits of computing while strengthening and advancing U.S. leadership in semiconductors.

Thank you to Applied Materials and congratulations on the launch of this center. I really look forward to what's next.
